M2 Schedule:

(https://umich.instructure.com/courses/816054/assignments/2952011)

- M2 Overview, Q&A (https://umich.instructure.com/courses/816054/discussion_topics/2770163)
  - **M2 Week 1:** Write v1 research protocols (survey (https://umich.instructure.com/courses/816054/assignments/2952015) and (DS or CP (https://umich.instructure.com/courses/816054/assignments/2952013))) and go through peer review (https://umich.instructure.com/courses/816054/assignments/2952012) . Then recruit and schedule sessions with participants (schedule for mid-to-late week 2)
  - **M2 Week 2:** Submit iteration v2 of your research protocols (survey (https://umich.instructure.com/courses/816054/assignments/2952016) and (DS or CP (https://umich.instructure.com/courses/816054/assignments/2952014))). Conduct research with participants.
  - **M2 Week 3:** Analyze, Present, and Report Results

(https://umich.instructure.com/courses/816054/assignments/2952011)

(yellow highlight represents the current assignment)

Analyze/interpret the results

- Your goal is to synthesize insights from all of your study methods to create a comprehensive look at current state of your personas and their context.
- The results of your analysis should include an articulation of IoT opportunities, problems, values, and constraints (among other dimensions) that your design should address.
- Some of this information will be baked into two deliverables that highlight the users' current state:
  - a **Journey Map** of a key process or task (current state...before you invent your product to solve a problem) and
  - an **Empathy Map** that iterates and expands on your M1 mini-personas and shares information about the current world your users live in.

Example Documentation Style and Structure:

- Document the results of your work on this milestone in a set of Slides exported as a PDF and submit to Canvas.
- **Format your report in a way that doubles as a presentation**, so you do not have to create PPT slides in addition to a written report. Use large visuals, high-level bullet points…and speaker's notes.
- *Please avoid reading the slides or speaker's notes word-for-word when you present. For each slide you are responsible for presenting, try to remember the 3 major points you must cover and speak to those. If those 3 points stand out on the slide, the slide can act as a visual reminder of what to cover. You can use index cards if referencing them helps you. For example, on slide 5 of the presentation below, know the three major research questions and speak to a little detail about each.*
  - Presentation Example Milestone 2.pdf (https://umich.instructure.com/courses/816054/files/43893482?wrap=1) (https://umich.instructure.com/courses/816054/files/43893482/download?download_frd=1)
  - (https://umich.instructure.com/courses/816054/files/43893482?wrap=1) Presentation Example Milestone 2.pptx (https://umich.instructure.com/courses/816054/files/43893475?wrap=1) (https://umich.instructure.com/courses/816054/files/43893475/download?download_frd=1)
  - More examples are available in Canvas > Pages > Browse and Be Aware of Past Student Projects (https://umich.instructure.com/courses/816054/pages/past-student-projects) Select a recent project and then after the project webpage loads, scroll down to the bottom of a student project to see their appendix of deliverables throughout the semester.

Documentation and Presentation

Please upload your presentation to this folder in Google Slides or PowerPoint file before class: (https://drive.google.com/drive/folders/1EKquvK4bxUFLdbuUd9BFK7daYP6vqjhU?usp=sharing) (https://drive.google.com/drive/folders/1ApwEly5_FDRsUF0Zt_79TcQWTj1kMfWa)

Your team will give a 15-minute presentation in class during the week that this milestone is due.
Your presentation should cover all the elements that you documented, summarized appropriately for the time constraints.

To make sure each team can finish their presentation on time and does not take time away from other teams, here is a general suggestion on how you could manage your presentation time. That said, the 15-minute time slot belongs to your team to use as you see fit.

1 min - Refresh the audience on milestone 1 - your audience, context, motivation, and preliminary concepts

- Restate where the project was at the end of the previous milestone. What aspects of the project scope had already been determined, which were still up in the air?
- It will be important to clearly state the starting point for this milestone so that it's possible to see how it evolved through the work you did. (A good summary would refresh your audience's memory, so they recall all the salient points from Milestone 1 in a paragraph or maybe two.)

1 min - Research Objectives and Methodology Selection

- What did the team want to learn in this milestone?
- What are the risks associated with not knowing the answers to these questions? (Imagine you must convince a key project stakeholder for time and funds to conduct this research. What could go wrong if they say no?)

4 min - Study 1 setup (Diary Study / Cultural Probe) and results

- What are the methods, rationale, and procedure of your study?
- How do you execute your study plan?
- How do you analyze your data?
- What are the results and findings from your study?

4 min - Study 2 setup (Survey) and results

- What are the methods, rationale, and procedure of your study?
- How do you execute your study plan?
- How do you analyze your data?
- What are the results and findings from your study?

4 min - Synthesized results & analysis (Empathy Map, Journey Map, opportunities identified that will lead the team into M3)

1 min - **Conclusion** and **Next Steps.** In the conclusion of this presentation, you need to clarify what your project scope is: **Audience** (in detail, represented in **Empathy Maps)**, **Subcontexts/Tasks** and **Opportunities** (in the context of a current state **Journey Map**). This will be what you begin designing in M3.

NOTE: We will not have time for Q&A, but if your group is hoping to receive feedback in a specific area, please mention that at the end so peers and instructors can tailor their critique notes to help you move forward.

The rest of the class should be actively listening and capturing feedback in real-time to provide constructive feedback to the group that is presenting. Feedback will be emailed to teams by instructors.

Friday Peer Feedback link (https://umich.instructure.com/courses/816054/pages/g14bc8d904698c8341e41531d0b52c478)

What to Include in Your Empathy Map and Journey Map

1. **Create an Empathy Map** for the primary persona you are designing for (if your project includes two primary personas that interact with technology, you will need to make 2 empathy maps). For each Empathy Map, the following data:
   1. **Name**, **demographic,** and relevant personal information to build empathy (3-5 bullets max).
   2. **Photo** or **drawing** of the persona

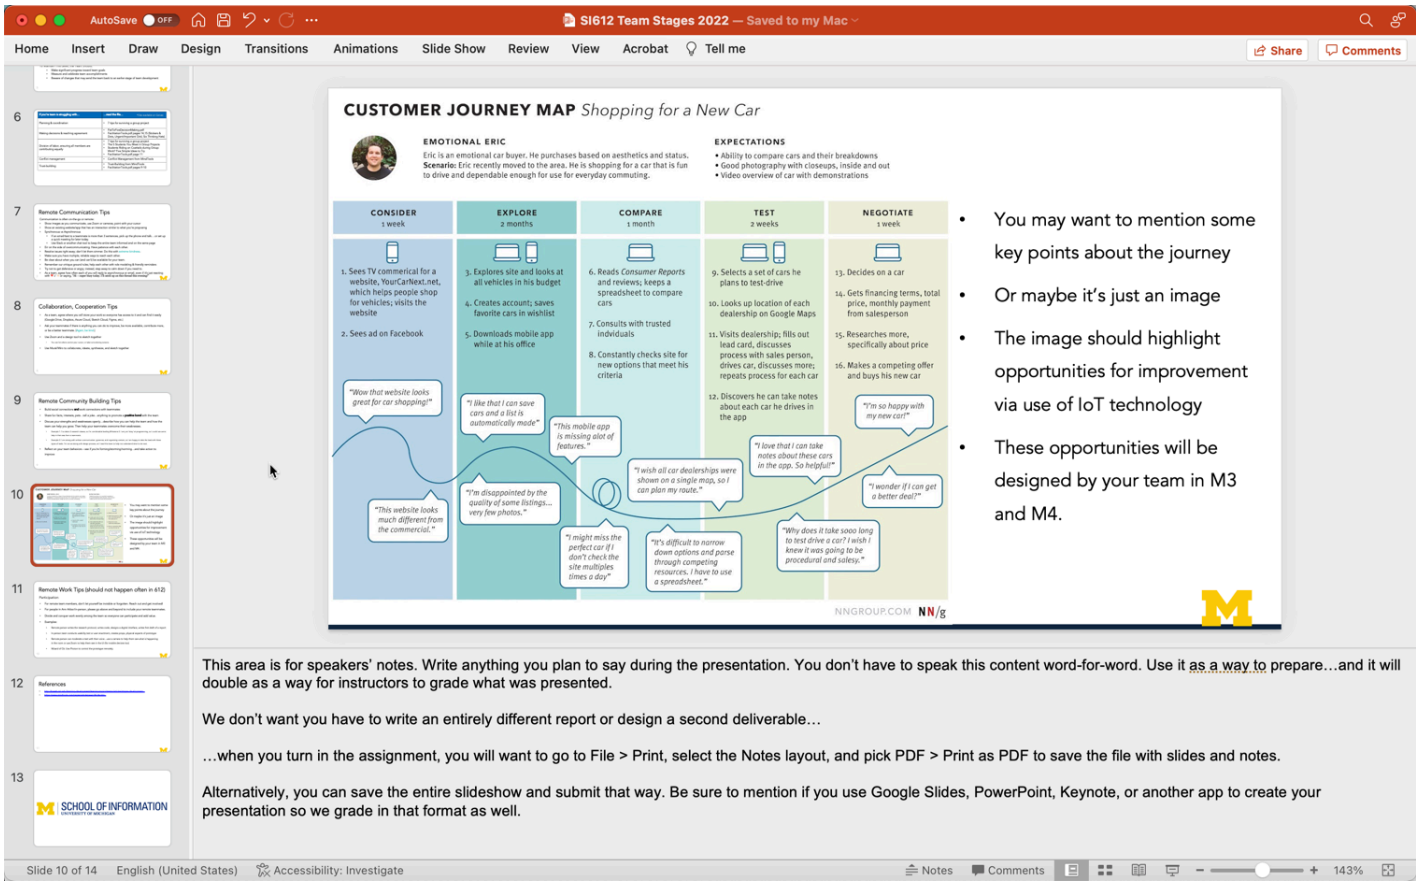
3. **Technology** – what is the current state of technology in the persona's life? Do they use tablets, mobile phones, laptops, other? For which subtasks? (Keep this high-level and brief.)
4. **Hear** – What do they hear when they are in the context of interest and performing the task of interest
5. **See** - What do they see when they are in the context of interest and performing the task of interest
6. **Think & Feel** - What are some of the key attitudes and behaviors you learned about during your studies? You'll need to keep these in mind during design.
7. **Say & Do –** Note that what people say may be different than what they do. Emphasize behaviors you observe if there is a contradiction.
8. **Pain Points** – what are the problems in the current process that form the basis of opportunities for improvement your design will address? What is difficult for the persona with the current way they operate?
9. **Wants & Needs** – what do they ask for? What do they think would make this task/process easier? (Keep in mind users aren't typically designers or technologists. You can't just deliver what they wish for, your team will need to analyze and brainstorm beyond these participant-delivered ideas.)

Create a Journey Map of the primary personas in context while executing the task/process you are aiming to improve. It must include:

1. **Small photo** to remind everyone who the persona is. Use the same photo/illustration as in the corresponding Empathy Map and label it with their name. If multiple users are involved in the process, be sure to include all essential parties. Each persona will need a separate row in the Journey Map so you can track their emotions and tasks separately.
2. **Task/Scenario**: What is the user trying to accomplish?
3. **Emotions**: Chart the user's **relative happiness** for each step of the process. Highlight or otherwise identify where their **pain** is and where you see **opportunities.**
4. **Major steps in the scenario**. Break the scenario down into phases or sub-steps of the process. For each phase:
    1. Concisely list the **steps** that take place. These may be chronologically ordered, or they may not. This will vary based on your audience and their scenario.
    2. For each persona, include a **quote** or user **attitude**. How does your user feel at each step of the journey?
    3. Map out their **relative feelings from positive to negative**. These aren't likely to have precise quantitative metrics tied to them, especially if your research leveraged qualitative methods. Use the data you have and do your best. You may need to use your gut feelings post-research to quantify these feelings.
    4. Indicate what **technology** devices or key physical artifacts are leveraged at each step.
    5. Indicate **opportunities** for improvement with an icon or highlight in some similar fashion. NOTE that this should not be the focus of the diagram. You are capturing current state. Don't dive into solutioning here; rather state problems that need solutions. When your team conducts ideation toward the end of M2, focus on these opportunities.

You will likely need to write a paragraph or maybe two to highlight the key takeaways from the Empathy Map and Journey Map. Focus the audience on the strategic opportunities that were discovered through the research (where users struggle most, where technology can assist humans without causing friction, areas that represent risks that should be handled with care, etc.).

Example Slide with Speaker's notes doubling as documentation



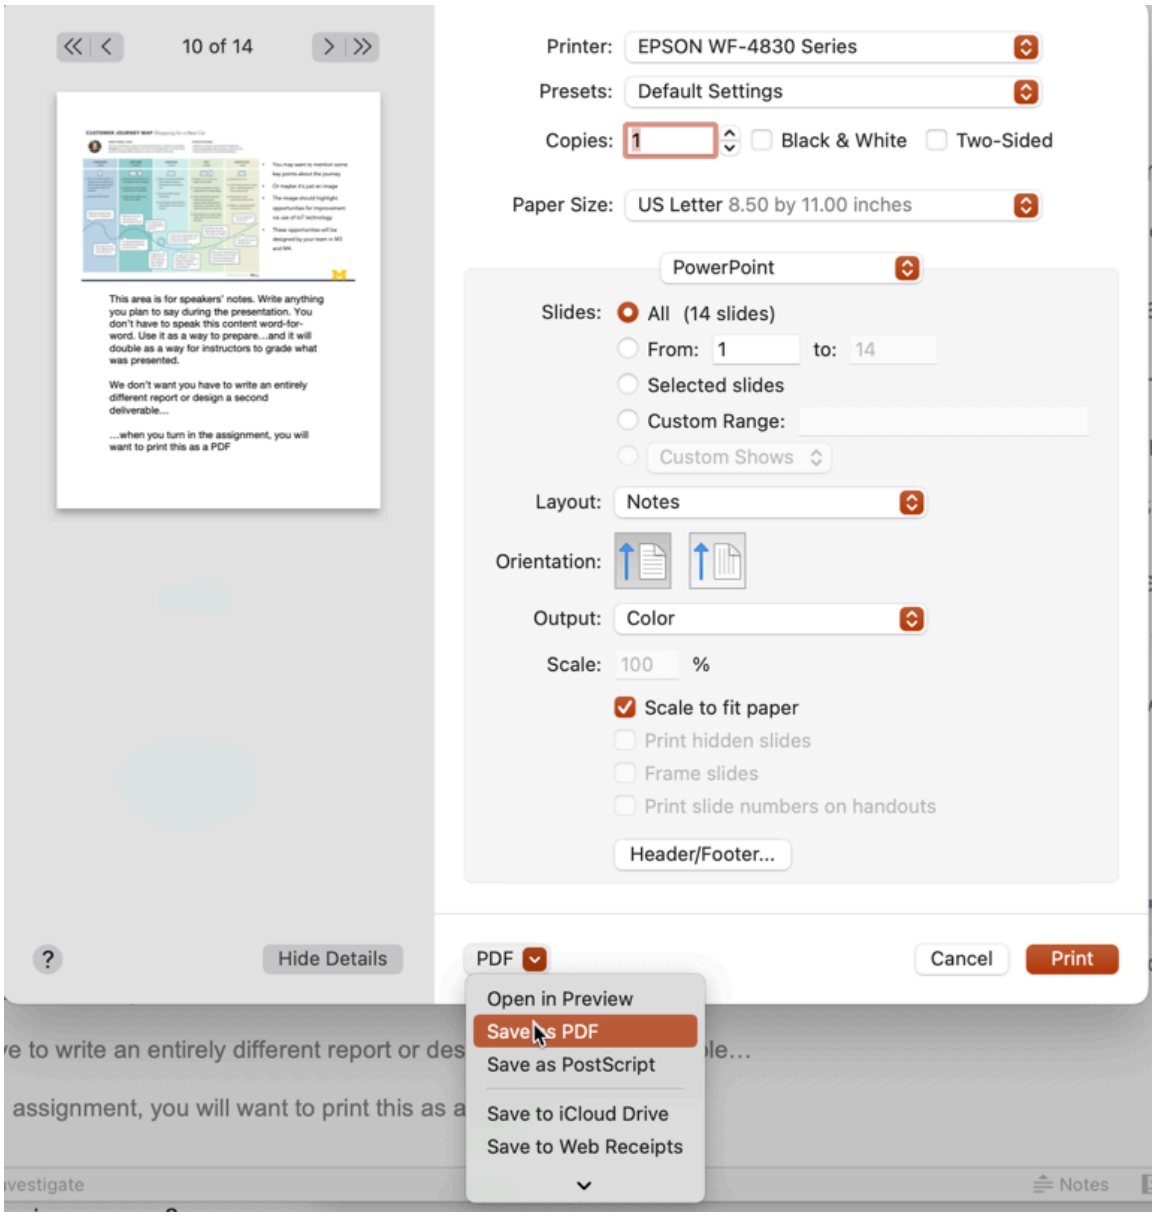
This area (bottom panel) is for speakers' notes. Write anything you plan to say during the presentation. You don't have to speak this content word-for-word. Use it as a way to prepare…and it will double as a way for **instructors to grade what was presented.**

We don't want you have to write an entirely different report or design a second deliverable…

…when you turn in the assignment, you will want to go to **File** > **Print**, select the **Notes** layout, and pick **PDF** > **Print as PDF** to save the file with slides and notes.

Alternatively, you can **save the entire slideshow and submit that way**. Be sure to mention if you use Google Slides, PowerPoint, Keynote, or another app to create your presentation so we grade in that format as well.

Example of How to save Speaker's Notes and Slides as PDF



If you try this method for turning the assignment in, be sure the speaker's notes and slides are all readable in the PDF.

It may be a good idea to turn the Empathy Maps and Journey Map in as separate PDFs...they may not be easy to read on the slide...depending on how much content you put on the diagrams.
